*Malaysian Sustainable Palm Oil (MSPO) - Part 4-2:
General Principles for Palm Oil Processing Facilities Including Supply Chain Requirements*

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Introduction

The purpose of the Malaysian Sustainable Palm Oil (MSPO) Guidance Document is to provide explanation on the criteria and indicators of the MSPO Standard (MS2530:2022) and to assist in understanding the requirements. Each part of the MSPO Standard has its own guidance document.

This guidance document has been reviewed by the Technical Committee on MSPO (TC MSPO) and Working Groups on MSPO (WG MSPO) members. The draft of this guidance document has undergone a series of pilot audits conducted in Sabah, Sarawak and Peninsular Malaysia to ensure its applicability and practicality. Feedback from the auditors who conducted the pilot test were incorporated to enhance this guidance document.

In this guidance document, reference was made to other related documents mentioned in the MSPO Standards (if applicable). Guidelines are the documents that explain the process for conducting assessments for Social Impact Assessment (SIA) and High Conservation Value Assessment (HCV). Another tool that reference was made is the GHG Calculator. Both the Guidelines and the GHG Calculator are not part of this guidance document.

Guidance Document for MS2530-4-2:2022
General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Guidance document for MS 2530-4-2:2022; Malaysian Sustainable Palm Oil (MSPO)

Requirements	Guidance
4.1 Principle 1: Management commitment and responsibility	
4.1.1 Criterion 1: Malaysian Sustainable Palm Oil (MSPO) policy	<p>The MSPO policy is a commitment in which the organisation outlines its intentions to support and enhance the production of sustainable palm oil.</p> <p>In establishing the policy, the management should consider the impacts of its operation on the three pillars of sustainability (including the impact on children) and how will the organisation contribute to enhance its current condition. These commitments could be stated in the policy statement .</p> <p>The management should also ensure that the policy is compatible with the organisation's strategic direction and business processes including the supply chain .</p> <p>The policy statement can be used for all sustainable palm oil schemes with a mention of MSPO.</p>
4.1.1.1 Indicator 1:	<p>A policy statement approved by the top management (and dated) should be established and publicly available. The policy should explain the nature of the organisation:</p> <ul style="list-style-type: none"> a) Names and location; and b) Size of the organisation. <p>The policy should also address issues that organisation is focusing on and consider the expectation of personnel, business partner and other stakeholders on their operations, products and services.</p>

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
	<p>This policy should be in line with the policies required in the Standards that:</p> <ul style="list-style-type: none"> a) Ethical Conduct; b) Occupational Safety and Health; c) Human Rights and Employment conditions; and d) Environment. <p>In addition, management of all levels should safeguard child rights i.e., ensure children are not abused, exploited or harmed in the organisation's premises, sites in the organisation's premises do not endanger children and ensure that child rights are respected throughout the business value chain.</p> <p>The clause “continual improvement” should be part of the policy statement.</p> <p>The policies should be communicated to all workforce and relevant stakeholders. Communication of the policies could be done in many ways depending on the stakeholders. For example, putting up at the notice board or highlighting the policy during the morning muster could be the avenues for communicating to employees. A formal letter with policy statement attached would be appropriate for business partners. While putting up on the website could be a way for public to know the policy.</p>
4.1.1.2 Indicator 2:	<p>Continual improvement could be any improvement that is within the organisation’s capabilities to enhance its sustainability.</p> <p>Continual improvement may include (but is not be limited to):</p> <ul style="list-style-type: none"> a) Addressing legal non-compliance or buyer specific requirements; b) GHG reduction; c) Wastage avoidance and/or waste reduction; and d) Enhancement of work environment (including safety and health aspect).

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.1.2 Criterion 2: New establishment	The intent of this criterion is to ensure minimal risks/impact to the community and environment (including wildlife and plants) resulted from the new establishment.
4.1.2.1 Indicator 1:	<p>Consideration such as green building, minimising GHG should be incorporated during the design stage.</p> <p>Among the approving bodies that need to be consulted are:</p> <ul style="list-style-type: none"> a) MPOB; b) JKKP; c) MIDA; and d) MPIC (Biofuel). <p>Conformance to these requirements should be in line with the latest announcement from time to time from the scheme owner.</p>
4.1.2.2 Indicator 2:	<ul style="list-style-type: none"> a) The requirement for EIA is listed in Appendix 1 (not exhaustive) as the authority has the power to give directive for the preparation of an EIA . b) If EIA is not applicable, EAIA should be conducted to identify the impacts to the environment from the processing facilities operation . c) EAIA could be done using the ISO 14001 framework. d) Management plan resulted from the assessment could be part of improvement item or as SOP. e) Progress of improvement item(s) should be reviewed at least quarterly to enable changes to the plan if required.
4.1.2.3 Indicator 3:	<p>SIA is a process used to identify, assess and manage social impacts that have arisen in the surrounding community and affecting other relevant stakeholders as a result of ongoing operations, or which may result from future operations.</p> <p>Refer to SIA Guidelines and Approach for the MSPO Standards.</p>

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.1.2.4 Indicator 4:	<p>The HCV approach is a tool for managing conservation values within a landscape. It is widely used internationally and using it enables the Malaysian palm oil industry to maintain its position in the global market.</p> <p>Refer to the HCV Assessment Guidelines for the MSPO Standards.</p>
4.1.3 Criterion 3: Existing site management	<p>The SOP are a set of instructions compiled by an organisation to implement its processes consistently.</p>
4.1.3.1 Indicator 1:	<p>The organisation should determine the SOP required for its operation. The SOPs should specify the requirement, roles and responsibilities of the person(s)-in-charge. Records related to its implementation should be maintained.</p>
4.1.4 Criterion 4: Training and competency	<p>The intent of this criterion is to ensure that employees including contractors are adequately trained and competence to enable them to fulfil their jobs and responsibilities in accordance with documented procedures, legal and MSPO requirements.</p> <p>Training needs should be the basis to establish the training plan/programme. Depending on the capabilities of the organisation and competency requirements, training should be carried out and evaluations of its effectiveness are conducted.</p> <p>Competency is the capability to apply or use a set of related knowledge, skills, and abilities required to successfully perform tasks and responsibilities in a defined work setting. Competency has 3 levels which include:</p> <ul style="list-style-type: none"> a) Competency requirements by laws: Employees must have valid competency certificate from an authorised organisation. For example, FFB graders, boilerman, scheduled waste manager. b) Competency requirements by job scope: For example, employees at production area and workshop. c) Competency requirements by the standards: For examples, competency in knowledge and awareness of MSPO among staff and workers.

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.1.4.1 Indicator 1:	<p>The organisation shall identify relevant trainings through training needs analysis (TNA) or also known as Training needs identification (TNI) for every level of employees based on competency/proficiency.</p> <p>Training needs should also cover the training required for safeguarding children</p> <p>Refer to the Sample of Training Needs Summary in Appendix 2.</p>
4.1.4.2 Indicator 2:	<p>A training programme is usually established yearly basis. The programme should include the frequency of trainings, target audience, training module and language considerations for foreign workers, if applicable.</p> <p>Trainings could be done internally or externally through formal or informal session depending on the level of competency needed.</p> <p>After the completion of the training, an evaluation of the effectiveness of the training should be conducted. This can be in the form of on-job training, classroom assessments, interviews or any other method appropriate to the organisation. Records of training and evaluation should be maintained.</p>
4.1.4.3 Indicator 3:	<p>The organisation should ensure that contractors and their workers have been trained on MSPO requirements and are competent to conduct the job.</p> <p>This requirement could be stipulated in the contract agreement to ensure that the contractors are aware.</p>
4.1.5 Criterion 5: Economic and financial viability plan.	<p>Profitability is one of the elements of sustainability. A documented business plan will guide the organisation to achieve its business objectives, reduce risks and uncertainties as well as capitalise on opportunities. A financially viable business enables MSPO implementation and improvement.</p>
4.1.5.1 Indicator 1:	<p>On top of the operation parameters (Indicator 4.1.5.2), expenditure for addressing social and environmental issues within the organisation, as well as profitability, should be part of the business plan.</p>

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.1.5.2 Indicator 2:	No further explanation for this indicator.
4.1.6 Criterion 6: Commitment to contribute to local sustainable developments.	The intent of this criterion is for the organisation to prosper together with the community, particularly at the local level. Consultation is key for understanding the community's needs and contributions that could be made on a short-, medium- or long-term basis.
4.1.6.1 Indicator 1:	<p>In ensuring that the organisation prosper together with the local community, key action is to understand what would be the needs and wants of the local community. This can only be obtained through consultation with the right stakeholders.</p> <p>The priority is to assist the community(ies) with their needs.</p> <p>When conducting consultation, representatives of the stakeholders need to be accepted by the group that they are representing.</p> <p>It is also important to note that support to employees and their families, which is part of fulfilling employment obligations or CSR related contribution, do not contribute to local sustainable development as intended by the Standard.</p>
4.1.7 Criterion 7: Complaints and grievances handling	The organisation should establish a mechanism to manage complaints and grievances. The key principle is to be transparent and strive for improvement.

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.1.7.1 Indicator 1:	<p>The method/mechanism to manage complaints and grievances system or procedure would depend on the organisation and complainant's capabilities.</p> <p>For example, the organisation could establish a committee to verify the validity of a complaint and review the action taken to address it while specific person-in-charge could be assigned to investigate a complaint in accordance with the SOPs.</p> <p>The organisation should ensure employees and stakeholders are aware of the existence of the complaints or grievances mechanism and that complaints can be made at any time.</p> <p>The mechanism should ensure impartiality to all parties involved. It should also consider gender and children's sensitivities.</p> <p>The organisation should ensure that the procedure is easily accessible and user-friendly, particularly towards indigenous communities, as well as provides protection for whistle-blowers and ensure anonymity when required.</p>
4.1.7.2 Indicator 2:	<p>The system shall record actions to be taken by the organisation with status updates (i.e., ongoing or resolved). The organisation should be able to show evidence of any ongoing complaints or grievances.</p> <p>The resolution should be mutually agreed and accepted by both complainant and the organisation. Any grievances should be resolved at an early stage.</p>
4.1.7.3 Indicator 3:	<p>All records of complaints and its resolutions that do not involve legal procedures should be maintained for at least 24 months. Complaints that are yet to be resolved should be updated and followed up.</p>
4.1.8 Criterion 8: Internal audit	<p>The intent of this criterion is to provide assurance to the management on the status of MSPO implementation. It could also assist in determining areas for improvement. The organisation should determine the competency of the auditors as well as the audit process to ensure reliable results.</p>

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.1.8.1 Indicator 1:	<p>The organisation should implement the internal audit programme as a systematic, independent and documented process for obtaining audit evidence. The evidence should be evaluated objectively to determine the extent to which the audit criteria are fulfilled.</p> <p>Among the items that could be included in the planning of the audit would be the frequency of the audit, audit coverage/scope, and auditor(s) competency (including knowledge of forced labour and children's rights). Follow up actions audit should include a timeframe for addressing/closure of findings.</p>
4.1.8.2 Indicator 2:	<p>Root cause analysis should be conducted to determine the corrections and corrective action to be taken by the organisation.</p> <p>There is no specific format for the root cause analysis in the MSPO requirement. Among the commonly used methods are the 5 whys, cause effect analysis and fishbone diagram.</p> <p>All non-conformities should be corrected before external audits and reviewed.</p>
4.1.9 Criterion 9: Management review	<p>The intent of this criterion is for the management to provide direction on the MSPO implementation. This could be achieved when top management decides on whether the implementation was satisfactory or whether other actions need to be taken including the provision of resources.</p>

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.1.9.1 Indicator 1:	<p>For b) examples of changes are:</p> <ul style="list-style-type: none"> • In discussing the review, changes in external issues could refer to emerging issues highlighted by media and experts in the industry that may affect the organisation (e.g., new legal requirement in the buyer country); • Internal issues could be the management of a different group of employees' needs; and • Needs and expectations of stakeholders related to sustainability (e.g., multiple sustainable palm oil scheme requirements) specific to stakeholders (e.g., community and buyer). <p>For c), this includes the progress of social, environmental, safety and health, water and other management plans required by the MSPO Standard.</p> <p>For e), example of resources could be manpower, financial and material.</p>
4.2 Principle 2: Transparency	
4.2.1 Criterion 1: Communication and consultation	<p>The intent of this criterion is to have a meaningful communication and consultation with stakeholders that may be affected by the organisation's activities.</p> <p>Communication and consultation should be in the appropriate languages and form that are acceptable to the stakeholders.</p> <p>However, when responding to stakeholders, the information must reflect the management decision/input. The consultation process should be an ongoing process to ensure any grievances can be resolved at an early stage. Stakeholders may include children in the living quarters or from nearby communities.</p>

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.2.1.1 Indicator 1:	<p>When establishing its communication system, the organisation should take into consideration the following:</p> <ul style="list-style-type: none"> a) Consider its capabilities establishing a system that comprises of SOP(s) to receive, respond and take action (if necessary) and maintain relevant documentation; b) Determine the types of information to be shared with different stakeholders and its consistency with information generated by MSPO implementation; c) Communicate on the procedures by informing the stakeholders of the availability and content and would not require the organisation to share the SOP; and d) Ensure the system should be able to support: <ul style="list-style-type: none"> i. Voluntary communication (e.g., relaying information on organisation's initiatives on sustainability including conduction of stakeholders' consultation); ii. Mandatory communication (e.g., reporting of monitoring activities to the authorities as required in the licensing condition); iii. Two ways communication (e.g., when receiving complaints or requests for information, taking necessary action and responding to stakeholders); iv. Various modes of communication- verbal, electronic messages (e.g., SMS, WhatsApp), formal write-in (e.g., letter, email), etc.; and v. A timeframe for responding to complaints/requests for information.

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.2.1.2 Indicator 2:	<p>Identification of stakeholders should be on the basis that operation of the organisation would have impact on them or whether their operation would have an impact on the organisation.</p> <p>Potential stakeholders may include (but are not limited to):</p> <ul style="list-style-type: none"> a) Employees; b) Shareholders; c) Authorities; d) Nearby community(ies) and indigenous peoples; e) Contractors/suppliers; f) Civil Society Organisation (CSO) related to children rights; and g) NGOs. <p>The organisation shall define clearly what are the necessary information to be included in the list of stakeholders to ensure a consistent in approach in managing the data (e.g., name, address, person-in charge, etc.)</p> <p>Records of all communication, including confirmation of receival are maintained. Effort should be made to ensure stakeholders understand the intent and content of any communication.</p>
4.2.1.3 Indicator 3:	<p>A designated person-in-charge would enable effective communications.</p>

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.2.1.4 Indicator 4:	<p>Management should determine the information/documents that can be shared:</p> <ul style="list-style-type: none"> a) Publicly, such as the organisation's MSPO policy, annual/sustainability report, complaint and grievance mechanism; and b) Upon requests, such as complaint and its resolution, negotiated agreements with indigenous people and local community, land ownership, etc. <p>In sharing the information/documents, consideration should be given to the capability of audience in terms of language and mode of communication. For example, publicly available information/documents on organisation's website could be in the National language or English. While procedure for complaint and grievance could also be available in both languages but explained to foreign workers and local communities in their own languages.</p>
4.2.2 Criterion 2: Traceability	<p>The intent of this criterion is to ensure all oil palm products are traceable. For example, crude palm oil and palm kernel are traceable to the mill and FFBs are traceable to plantations/smallholdings/collection centres. The overall traceability data is managed by MPOCC through its IT platform.</p> <p>The organisation should track traceability on the basis of one level up and one level down of its supply chain.</p> <p>Traceability starts at the plantation while traceability models start at the mill/collection centre.</p>
4.2.2.1 Indicator 1:	<p>The SOP on traceability and its content should depend on the needs of the organisation.</p> <p>Among the information that could be in the SOPs (Indicator 4.2.2.2), as follows:</p> <ul style="list-style-type: none"> a) Site specific handling of certified and non-certified products as well as supply chain models; b) Training for the handlers; c) Information in the certification system document related to supply chain; and d) Information required in the MSPO Trace

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.2.2.2 Indicator 2:	All information does not necessarily be recorded in a single document.
4.2.2.3 Indicator 3:	The person-in-charge of handling traceability requirements should be able to make decision, for example, discontinuing the acceptance of products that are not conforming to traceability requirements.
4.2.2.4 Indicator 4:	No further explanation for this indicator.
4.2.2.5 Indicator 5:	Non-conforming palm oil products relate to traceability requirements as per the definition in Part 1.

Requirements	Guidance
4.2.2.6 Indicator 6:	<p><u>Supply Chain Models</u></p> <p>SEGREGATION</p> <p>MSPO Certified Palm Oil</p> 

Requirements	Guidance
	<p>Uncertified Palm Oil</p> 

Guidance Document for MS2530-4-2:2022

Requirements	Guidance
	<p>MASS BALANCE</p>  <p>Refer to Guidance for Oleochemicals and its Derivatives under MSPO SCCS.</p>
4.2.2.7 Indicator 7:	Refer to Guidance for Oleochemicals and its Derivatives under MSPO SCCS.
4.2.2.8 Indicator 8:	No further explanation for this indicator.
4.2.2.9 Indicator 9:	No further explanation for this indicator.
4.2.2.10 Indicator 10:	Refer to the MSPO Certification Scheme Document.

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.2.2.11 Indicator 11:	Currently the IT system is known as MSPO trace.
4.2.3 Criterion 3: Transparent and fair price dealing	The intent of this criterion is to ensure that all parties along the supply chain are not at a disadvantage or put into vulnerable situations. The criteria used for determining prices should be transparent to all parties and any party that considers prices to be unfair should have access to the grievance mechanism.
4.2.3.1 Indicator 1:	Documentation on the criteria for pricing could be on quality, delivery, long term relationship, and overall performance together with other information, if available.
4.2.3.2 Indicator 2:	No further explanation for this indicator.
4.2.4 Criterion 4: Ethical conduct	<p>Ethical behaviour is characterised by honesty, fairness and equity in interpersonal relationships and mutual respect in dealings. This should cover zero tolerance for violence, exploitation and abuses as well as safeguarding the integrity of all entities and prevent conflict of interest.</p> <p>Hence, the best means of demonstrating the values of ethical conduct/behaviour is by having a policy statement that is communicated and applicable to all levels of workforce including contractors.</p> <p>In formulating policy, organisation could refer to "<i>Garispanduan Tatacara Mencukupi, SPRM</i>" as a guide.</p>
4.2.4.1 Indicator 1:	The policy should be approved by the top management and (and dated), in line with the anti-corruption legislation.
4.2.4.2 Indicator 2:	The system should cover both leading indicators such as the frequency of briefings conducted on the policy and SOPs (e.g., code of conduct, procurement) as well as lagging indicator such as the number of non-conformances against the organisation's policy for ethical conduct.

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.3 Principle 3: Compliance to legal and other requirements	
4.3.1 Criterion 1: Regulatory requirements	The intent of this criterion is to highlight that all operations must comply with legal requirements and any new requirements shall be updated. Going beyond legal requirements is encouraged.
4.3.1.1 Indicator 1:	A general list of the applicable legal requirements is in Appendix 4. The organisation should enhance and update the list of applicable legal requirements as per their needs.
4.3.1.2 Indicator 2:	<p>Method to monitor compliance could be through internal audit, specific compliance verification exercises, declaration by the person-in-charge based on scope of work, management walkabout, etc.</p> <p>The frequency of monitoring could be stated in the SOP and conducted more than once a year. The SOPs could also state the person-in-charge to be responsible to monitor compliance including updating the list of applicable legal (and other) requirements and maintaining the record of implementation.</p>
4.3.2 Criterion 2: Rights to use land	The intend of this criterion is to highlight that all organisation must respect the rights of any person, local community or indigenous people that they have over land; that is occupied as milling/processing facilities or collection centre. Rights particularly for accessibility or as part of roaming areas.
4.3.2.1 Indicator 1:	Rights described in this indicator could be right of way (access road), access to water or other natural resources, water management (e.g., extraction of water that could lead to adverse impact to the surrounding area).
4.3.2.2 Indicator 2:	Where customary or legally owned lands have been taken-over there should be documentary proof of the transfer of rights (sale) and payment or provision of agreed compensation.

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.3.2.3 Indicator 3:	<p>FPIC have to be obtained prior to any acquisition of land for conversion to a processing facilities and fair compensation have been agreed upon. Hence, these documents should be used as reference for any disputes.</p> <p>Where there is dispute or land ownership is contested, grievance and complaint mechanism should be used or dealt through legal channel.</p>
4.3.2.4 Indicator 4:	<p>All operations in any organisation should be within the legally determined area. There should also be a map showing the legal area and location of the boundary maker.</p> <p>Boundary markers can be in form of fences.</p>
4.4 Principle 4: Responsibility to social, health, safety and employment conditions	
4.4.1 Criterion 1: Social Impact Assessment (SIA)	<p>The intent of this criterion is to ensure that the organisation prevents or minimises the social impacts resulting from its operation.</p> <p>If SIA was conducted for integrated complex (plantation with mill or other processing facility), the updated/reviewed SIA should be referred by the mill/processing facility.</p> <p>Refer to the SIA Guidelines and Approach for the MSPO Standards.</p>
4.4.1.1 Indicator 1:	Refer to the SIA Guidelines and Approach for the MSPO Standards.
4.4.1.2 Indicator 2:	Refer to the SIA Guidelines and Approach for the MSPO Standards.

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.4.1.3 Indicator 3:	Refer to the SIA Guidelines and Approach for the MSPO Standards.
4.4.2 Criterion 2: Employee's safety and health	The intent of this criterion is to prevent any injury and ill health as well as enhance the work environment.
4.4.2.1 Indicator 1:	<p>The occupational safety and health policy is a set of commitments in which the top organisation outlines the direction to implement and continually improve its occupational safety and health performance.</p> <p>The policy should state the commitment to prevent injury and ill health.</p> <p>In developing its occupational safety and health policy, the organisation should consider its consistency and coordination with other policies.</p>
4.4.2.2 Indicator 2:	<p>OSH Hierarchy of Control:</p> 

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.4.2.3 Indicator 3:	No further explanation for this indicator.
4.4.3 Criterion 3: Employment conditions	<p>Respecting human rights is paramount in ensuring good relationship between employer and employee.</p> <p>Specific attention to young persons at work will enable them to develop their full potential.</p>
4.4.3.1 Indicator 1:	A policy is a set of commitment that outlines the organisation direction in respecting human rights. The policy statement should be approved by top management (and dated). All levels of operations including contractors, should be briefed on the policy.
4.4.3.2 Indicator 2:	<p>Workers should enter into employment voluntarily and freely, without the threat of a penalty, and should have the freedom to terminate employment without penalty given reasonable notice or as per agreement. This is in accordance with ILO conventions: Forced Labour Convention, 1930 (No. 29); Protocol of 2014 to the Forced Labour Convention, 1930 (P029); Abolition of Forced Labour Convention, 1957 (No. 105); Forced Labour Recommendation, 2014 (No. 203).</p> <p>The employment agreement for citizen should meet legal requirements. The employment agreement for migrant workers should meet the immigration requirements and ratified international standards. If applicable, the organisation should disclose information regarding progress in ongoing efforts to legalise undocumented workers.</p> <p>Any deductions made should not jeopardise take-home wages required for day-to-day necessities.</p> <p>Statutory recruitment fees paid by employers as determined by the authorities such as work permits and levies.</p> <p>Refer to the booklet for ILO Indicators of Forced Labour by the International Labour Office.</p>

Guidance Document for MS2530-4-2:2022

Requirements	Guidance
4.4.3.3 Indicator 3:	No further explanation for this indicator.
4.4.3.4 Indicator 4:	No further explanation for this indicator.
4.4.3.5 Indicator 5:	<p>Payslip should contain, at a minimum, the following information:</p> <ul style="list-style-type: none"> a) Number of working days; b) Working days on rest day/ public holiday; c) Rate of pay – normal / rest day / public holiday; d) Over time rate & hours; and e) Deductions. <p>Copies of payslip should be provided to employees.</p>
4.4.3.6 Indicator 6:	No further explanation for this indicator.
4.4.3.7 Indicator 7:	No further explanation for this indicator.
4.4.3.8 Indicator 8:	No further explanation for this indicator.
4.4.3.9 Indicator 9:	No further explanation for this indicator.
4.4.3.10 Indicator 10:	Age verification documents include a government recognised photographic identification document, where available.
4.4.3.11 Indicator 11:	No further explanation for this indicator.

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.4.3.12 Indicator 12:	<div data-bbox="869 308 1986 1038" data-label="Diagram"> <pre> graph TD A["(A) Principal employer (Controlling third party)"] B["(B) Direct employer (Agency)"] E["Employees working on principal employers' (A) processing facilities"] A <--> "Contract for service (fulfill all legal requirement)" B B <--> "Contract of service (fulfill all legal requirement)" E A -- "CONTROL" --> E E -- "WORK" --> A A --- WPN["Work of permanent nature (e.g., maintenance work)"] </pre> </div> <ul style="list-style-type: none"> • Contract for service is a formal, legally binding agreement between a business and a self-employment individual. It is more of a “business to business” type of contract. • Contract of service, also known as contract of employment or employment contract, refers to a written agreement between an employer and an employee that taken together with the rights of each under statute and common law, determines the employment relations between them. • Work of permanent nature refers to a situation where a worker who works on a permanent employment contract, for a permanent positions and should be eligible for full employment benefits offered by the employer.

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.4.4 Criterion 4: Living conditions	This criterion emphasises on the responsibility of the organisation to provide decent living condition if accommodation is offered to employees as part of the employment.
4.4.4.1 Indicator 1:	<p>The relevant legal requirement would be The Employees' Minimum Standards of Housing, Accommodations and Amenities Act for Peninsular Malaysia and the Department of Labour's agreement/approval for Sabah and Sarawak.</p> <p>The accommodation provided should be suitable to the needs of the employees (single, group or family). It should also be suitable for the local climate and enable respect for privacy. For employees who opt to not stay at the provided facilities, there is no obligation for the management to provide housing or travelling allowance as well as privileges (on working hours).</p>
4.5 Principle 5: Environment, natural resources, biodiversity and ecosystem services	
4.5.1 Criterion 1: Environmental management	Protection of the environment is an important aspect of sustainability. The intent of this criterion is to manage the environmental impacts of the organisation's activities and products. Managing the impact should follow the highest level of commitment through the prevention of pollution, optimising resources, conserving/enhancing biodiversity and minimising climate change.
4.5.1.1 Indicator 1:	<p>A policy is a set of commitment that outlines the organisation direction on the environment.</p> <p>A policy statement approved by top management (and dated) should be established. In establishing the policy, the management should consider the environmental issues derived from the environmental assessment and how will they manage it. These could be stated in the policy statement. The policy should be communicated to relevant stakeholders in ways most appropriate to them.</p> <p>The management should also ensure that the policy is compatible with the organisation's strategic direction and business processes as well as its legal compliance commitment.</p>

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.5.1.2 Indicator 2:	<p>There is no specific assessment format for MSPO. However, if the organisation is subjected to an EIA, in accordance to legal requirement, the report could be used as an initial assessment. Improvement to its environmental management plan could be done to include the operation stage.</p> <p>For organisations where EIA are not a requirement, assessment formats such as the Environmental Aspects and Impacts Assessment (EAIA) of the ISO 14001 could be used.</p> <p>The assessment should be updated whenever there is a change in process, equipment/technology or environmental receptor.</p>
4.5.1.3 Indicator 3:	<p>The results of the assessment (refer to Indicator 4.5.1.2) should be used as the basis the for environmental management plan, taking into consideration legal compliance as one of the criteria.</p> <p>The plan should be reviewed to know its achievement and revised if necessary. The review should be more than twice a year to enable changes to be incorporated into the plan.</p>
4.5.1.4 Indicator 4:	<p>The organisation should identify the types of training related to environmental management for all level of employees.</p> <p>Refer to Principle 1, Criterion 4.</p>
4.5.2 Criterion 2: Efficiency of energy use and use of renewable energy	<p>The intent of this Criterion is to create awareness on the impact of using non-renewable energy related to climate change and resource optimisation. Organisation should initially collect data on energy consumption (both renewable and non-renewable).</p> <p>Whenever possible, an appropriate management plan should be established to reduce non-renewable energy and increase renewable energy consumption.</p>

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.5.2.1 Indicator 1:	<p>Organisation should monitor the amount of non-renewable energy consumption with the aim of establishing a baseline for reduction or achieving optimum efficiency. Management plan to support the above should be established.</p> <p>Fuel usage should be monitored for all activities including the usage by contractors.</p>
4.5.2.2 Indicator 2:	<p>Examples of renewable energy include solar, wind, biogas, geothermal, biomass, low-impact hydroelectricity and emerging technologies (wave and tidal power).</p>
4.5.3 Criterion 3: Waste management and disposal	<p>The intent of this criterion is to prevent pollution from waste disposal and encourage resource optimisation.</p>

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.5.3.1 Indicator 1:	<p>In establishing the management plan, the organisation should consider the waste management hierarchy of control:</p> <div data-bbox="1137 411 1594 769" data-label="Diagram"> </div> <p>The organisation should undertake the most preferred waste management control before deciding on the next line of control. An analysis of control should be periodically reviewed to promote a more sustainable approach towards waste management.</p>
4.5.3.2 Indicator 2:	<p>For issues on implementation related to the legal requirement, (e.g., storage of waste longer than the allowed time) the organisation should have an agreement with the Department of Environment (DOE).</p>
4.5.3.3 Indicator 3:	<p>The organisation should ensure domestic wastes are disposed of appropriately to minimise the risk of environmental contamination including no dumping of waste near water courses (e.g., river, stream, lake, reservoir).</p> <p>If there are no clear guidelines by the local authority on the siting of waste disposal areas within the organisation premise, the general principle of minimising the risk of contamination the environment and watercourses as well as minimising public health issues should be considered.</p>

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
4.5.4 Criterion 4: GHG emission	The agriculture sector is known as one of the sources of GHG emissions. The intent of this criterion is to support the national commitment by using a stepwise approach as listed in the indicators. Currently, reporting is only to the scheme owner. The reporting is not for the carbon value of the product.
4.5.4.1 Indicator 1:	This is the first step in familiarising the industry with greenhouse gases.
4.5.4.2 Indicator 2:	No further explanation for this indicator.
4.5.4.3 Indicator 3:	The information is to be reported to the scheme owner by using MSPO GHG Calculator based on the reporting period from January to December and submitted to the scheme owner by 31st March of the subsequent year.
4.5.5 Criterion 5: Water Resources	The intent of this criterion is for the organisation to be aware that water, despite being a renewable source, if not properly managed, could still result in shortages as well as deterioration in the quality of supply. The water management plan should include information on water sources, its usages, and treatment involved; to optimise water management and minimise water pollution.
4.5.5.1 Indicator 1:	The water management plan should be able to address the effects of water usage and the organisation's activities on water resources, as well as ensure there is no contamination of water resources. This can be part of a social impact assessment.
4.5.5.2 Indicator 2:	The main authority to be consulted for approval/agreement would be the state water authority as well as the Department of Irrigation and Drainage (at the district level). Approval may be in the form of licence/permit or documented agreement between the authorities and the organisation
4.5.6 Criterion 6: Environmental conservation and protection	The HCV approach is a tool for managing conservation values within a landscape. It is widely used internationally and using it enables the Malaysian palm oil industry to maintain its position in the global market.

Guidance Document for MS2530-4-2:2022

General Principles for Palm Oil Processing Facilities including Supply Chain Requirements.

Requirements	Guidance
	Refer to the HCV Assessment Guidelines for the MSPO Standards.
4.5.6.1 Indicator 1:	Refer to the HCV Assessment Guidelines for the MSPO Standards.
4.5.7 Criterion 7: Zero burning practices	The intent of this criterion is to ensure no fire is used for the disposal of wastes in processing facilities activities. However, a response and mitigation plan should be established in case of any fire occurrences.
4.5.7.1 Indicator 1:	Fire risk assessment could be conducted to know the possibility of fire occurrence in the site. Prevention, mitigation and response plan should be established with clear responsibilities. The response plan should be tested to know its practicality.

Environmental Impact Assessment (EIA) Requirement Guidance

Peninsular Malaysia:

EIA requirements related to agriculture as in The Environmental Quality (Prescribed Activities) (EIA) Order 2015:

First schedule:

1. Land development schemes covering an area of 20 hectares or more but less than 500 hectares to bring forest into agricultural production.
2. Development of agricultural estates covering an area of 500 hectares or more involving changes in the type of agricultural use.
3. Conversion of an area of:
 - i. Mangrove forest
 - ii. Peat swamp forest or
 - iii. Fresh water swamp forest

for industrial, housing or agricultural use covering an area of 20 hectares or more but less than 50 hectares.

4. Development in slope area – Development or land clearing less than 50 per cent of an area with slope greater than or equal to 25° but less than 35°

Second Schedule:

1. Land development scheme covering an area of 500 hectares or more to bring forest into agricultural production.
2. Any drainage of wetland, wild-life habitat or dry inland forest covering an area of 20 hectares or more.
3. Conversion of forest at 300 meters or more above mean sea level to other land use covering an area of 100 hectares or more
4. Logging or conversion of forest to other land use within:
 - i. A catchment area or reservoirs used for municipal water supply, irrigation or hydro-power
 - ii. An area adjacent or near to any state park, national park or national marine park
 - iii. Any state park, national park or national marine park
 - iv. An area gazetted as water catchment forest under the National Forestry Act 1984 [Act 313]

- v. Conversion of an area of:
 - a) Mangrove forest
 - b) Peat swamp forest or
 - c) Fresh water swamp forest for industrial, housing or agricultural use covering an area of 50 hectares or more.
5. Development in slope area – Development or land clearing of 50 per cent or more of an area with slope greater than or equal to 25° but lesser than 35°.

Sarawak:

Section 11A (1) - Natural Resources and Environment (Amendment) Ordinance 1994, stipulates the statutory requirement for EIA for development activities in Sarawak. Details are further stipulated in The Natural Resources and Environment (Prescribed Activities) Order, 1994.

The first schedule of the prescribed activities related to agricultural development:

- i. Development of agricultural estates or plantations of an area exceeding 500 ha:
 - a) From land under secondary or primary forests; or
 - b) Which would involve the resettlement of more than 100 families; or
 - c) Which would involve modification in the use of the land.
- ii. Conversion of mangrove swamps into agricultural estates having area exceeding 50 ha.

Any other activities which may damage or have an adverse impact on quality of environment or natural resources of the state including the following:

- i. The clearing of vegetation on any land or the breaking up of any land for any purpose of an area exceeding 50 hectares;
- ii. In the opinion of the Board may pollute;
- iii. In any way affect the sources of water for human consumption;
- iv. Activities which may cause pollution of inland waters of the state or endanger marine or aquatic life, organism or plants in inland water;
- v. Pollution of the air or erosion of the banks of any rivers, watercourses or the foreshores and fisheries.

Sabah:

The specific EIA requirement for Sabah is stipulated in the Environmental Protection Enactment 2002, and further detailed in Environmental Protection (Prescribed Activities) Order 2005.

Prescribes activities related to agriculture are categorized into two as stipulated in Schedule 1 and Schedule 2 of the Order. Schedule 1 listed activities requiring proposal for mitigation measures (PMM):

- i. Development of agricultural estates or plantations covering an area of 100 hectares or more but less than 500 hectares
- ii. Development of agricultural estates or plantations involving change in type of crops covering an area of 100 hectares or more but less than 500 hectares
- iii. Conversion of wetland forests into agricultural estates or plantations covering an area of 20 hectares or more but less than 50 hectares

Schedule 2 listed activities requiring EIA:

- i. Development of agricultural estates or plantations covering an area of 500 hectares or more
- ii. Development of agricultural estates or plantations involving change in type of crops covering an area of 500 hectares or more
- iii. Conversion of wetland forests into agricultural estates or plantations covering an area of 50 hectares or more
- iv. Agricultural programmes involving the settlement of 100 families or more.

Sample of Training Needs Summary

Work Function/Types of Training Needed	Top Management	Internal Auditors	Person-in-charge	All employees
MSPO Standards and Sustainability	/	/		
Management Roles in Implementing MSPO	/	/		
MSPO related legal requirements (Acts & Regulation)	/	/	/	
MSPO Awareness and Organization MSPO Related Policies		/		/
MSPO General SOP		/		/
Chemical Handling		/	/	
Scheduled Waste Management		/	/	
Emergency response plan		/	/	
Internal Audit		/		
HCV/SIA/GHG reporting		/	/	

Note:

1. Training Needs should be specific to an organisation and the sample above has least information
2. The summary could also identify the level of competency needed e.g.:

For scheduled wastes management person-in-charge;

- A manager would need certification in accordance to legal requirement
- A scheduled wastes handler needs to be trained on Scheduled Wastes Regulation and organization SOP on scheduled waste management.

FPIC Guidance for MSPO Standard

What is FPIC?

Free, Prior and Informed Consent (FPIC) is the right of Indigenous Peoples and local communities to give or withhold their consent to any independent smallholder or organisation's plantings affecting their rights, land, livelihoods, resources, territories, food security or environment. This right is exercised through representatives of their own choosing and in a manner consistent with their own customs, values, and norms. FPIC is a specific right to Indigenous Peoples that was established by the International Labour Organization (ILO) Convention 169 on Indigenous and Tribal Peoples and United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP). Countries that have adopted the ILO Convention and/or signed on to the UN Declaration may establish additional rights of Indigenous Peoples under national laws. While some countries have embedded the principles of FPIC into their national laws, this right is still absent in many countries. As the right to self-determination is a fundamental human right, MSPO requires that the principles of FPIC are applied.

- **Free:** Consent is given by the affected Indigenous Peoples and local communities voluntarily without coercion, duress, or intimidation.
- **Prior:** The consent is given before the specified activity is authorised or commenced.
- **Informed:** The consent is given after the Indigenous Peoples and local communities have received the relevant, timely, and culturally appropriate information necessary to make a fully informed decision.
- **Consent:** The Indigenous Peoples and local communities take a collective decision to grant or withhold approval of the specified activity.

FPIC is both a process and an outcome. As a process, FPIC is a series of information exchanges, consultation, internal deliberation, and negotiation steps conducted to seek consent from the affected Indigenous Peoples/local communities prior to implementing a given set of activities. This process may result in unqualified consent or consent with conditions for the proposed activities (or for a modified proposal), or it may result in the absence of consent. At the end of this process, the FPIC outcome is a written document that specifies what was or was not agreed to.

When the Indigenous Peoples and local communities provide consent, the written document further elaborates the terms of this consent, including the nature of the agreed activities, conditions placed on its implementation, monitoring plans, grievance mechanisms, and other terms or processes to ensure that agreed plans are duly enacted.

Not all FPIC processes lead to consent, and it is the right of the affected Indigenous Peoples and local communities to withhold consent. If this is the outcome, then the organisation needs to accept that the specified activity cannot proceed as planned. However, if appropriate—and only if the Indigenous Peoples and local communities invites continued dialogue—then a

modified proposal could then be developed and subject to further community engagement through the FPIC process.

Why FPIC?

- It is a requirement of the MSPO standards,
- It is a right of Indigenous Peoples enshrined in international law,
- It is widely accepted in global best practice standards,
- It facilitates the organisation achieving a 'social license to operate,'
- It ensures the organisation respects communities' wider rights to lands and resources and to choose their own representatives,
- It means the organisation cannot be accused of 'land grabbing,'
- It secures good relationships with local communities, important for smallholder partnerships and trouble-free employment,
- It results in a negotiated agreement binding to both the organisation and the communities,
- It helps the organisation avoid being embroiled in land conflicts, and
- It helps the organisation avoid costly litigation, work stoppages or lost access to plantings resulting from land disputes.

How to carry out FPIC?

An FPIC process will vary according to the specific local context in which a project is to be developed, or in some cases, is already in the development stage. In the latter case, the organisation should cease operations in areas where disputes exist to avoid exacerbating ongoing conflicts. It may also be the case that the Indigenous Peoples/local communities affected already have their own FPIC guidelines. That said, in any given FPIC process, it is equally important to assess the qualitative aspects as well as the time devoted to it, with the following six key steps that any project manager must consider within different phases of the project cycle:

Project Identification

- (1) Identify the Indigenous Peoples'/ local communities concerns and their representatives
- (2) Document geographic and demographic information through participatory mapping

Project Formulation

- (3) Design a participatory communication plan and carry out iterative discussions through which project information will be disclosed in a transparent way

(4) Reach consent, document Indigenous Peoples' needs that are to be included into the project, and agree on a feedback and complaints mechanism

Project Implementation

(5) Conduct participatory monitoring and evaluation of the agreement

Project Closure

(6) Document lessons learned and disclose information about project achievements

The above process will need human and financial resources, and time, though it should not entail higher additional costs than the ones associated with the process of stakeholder engagement that any project or programme should undertake in proportion to the project scale.

Who is involved in FPIC and why is consultation important?

FPIC processes may involve various stakeholders, including the organisation, Indigenous Peoples, local communities, indigenous organisations, government agencies, religious institutions, and third parties. Each stakeholder plays a different role during the FPIC process.

Consultation with stakeholders is an ongoing process that organisations should engage in throughout the life of the organisation's operations and across supply chains to exchange information, identify and resolve challenges and problems, and thereby improve relations and outcomes for both the organisation and its stakeholders. Consultations with Indigenous Peoples and local communities are always required to ensure the right of meaningful and effective participation in the matters that may affect these groups. Consultation processes carried out in good faith should aim to reach agreement between the organisation and its stakeholders on the subject topics.

Acceptable forms of stakeholder communications and engagement include:

- Sending a formal letter or visiting the village and consulting with community members and/or representatives to decide on whether a meeting is wanted, and if so, who must be present.
- Best practice for any full community meetings includes giving communities adequate notice and preparation
- Active monitoring and support from third parties or other stakeholders may be helpful for the proper functioning of the process and ultimately it is for the community to decide whether they invite, request or allow such monitoring and support and under what terms and conditions.

How to identify customary land and prepare participatory maps?

A crucial first step for organisations seeking to acquire lands for plantations is to ascertain which areas are subject to legal and customary rights. Given that land titling systems usually do not register areas subject to the collective land rights of customary law communities, known as 'native customary rights' in Sarawak and Sabah, it falls on the organisation to find out which

lands belong to the local communities by direct and open communication with the people themselves.

One of the best ways of clarifying the extent of customary rights is through participatory mapping. Using geomatic technologies, like GPS, it is now relatively cheap, quick and simple to work with community members and map the boundaries of indigenous lands and the forms of customary land use within these areas.

Consent for the processes of participatory mapping must be received from the communities prior to beginning. This includes agreeing on the process, participation, a timeline of implementation, terms of ownership and distribution of the documents, identification of key contact persons and details, and any in-kind compensation offered to those participating.

A first step may be to select a joint team of community representatives who will oversee community involvement in the mapping and who may be accompanied by organisation observers. The team can then use the GPS devices to survey the boundaries of community lands and establish where there is overlap between these lands and the areas where the organisation is interested in establishing its operations. More detailed mapping can then be undertaken of the areas of overlap to establish exactly who are the rights-holders in these areas and what are the current and historical land uses and cultural values of the areas. These maps can also be drawn out on paper referencing key natural resources, boundaries and religious sites among other areas of interest.

To map the focus area, all parties involved can make reference to maps depicting the location of important areas to communities. In case there is no previous formal mapping of the area, Indigenous Peoples and local communities can draw out the map based on cultural geographic knowledge.

Verification and validation of the maps must be carried out upon finalisation through consultations. Copies or summaries of each must be provided to communities in appropriate forms and languages and in a timely manner.

These maps are themselves important indicators of conformance with relevant MSPO criteria and indicators, and this information can then be used further in impact assessments and negotiated agreements.

Throughout the initial stages of FPIC, the organisation should aim to build consensus with its stakeholders. Most communities are made up of different types of people with different priorities and interests, so decisions may take time. Communities often place high value on maintaining harmony and good relationships among their members. Consequently, community representatives may not want to rush other community members or force an agreement. As a best practice, holding broad consultations with the wider community, rather than on a one-to-one basis with selected representatives, can be more effective as the social pressure of a collective setting often tends to limit individual decision-making based on self-interest rather than the collective will.

How to engage with representative organisations?

Free, Prior and Informed Consent means that communities or peoples should be represented by institutions of their own choosing. These institutions may be:

- the people's own customary institutions,
- institutions that have been imposed by the State but later accepted by the people, or
- novel institutions set up by the people themselves to deal with outsiders.

There is no rule to say which is the best – circumstances vary too much. The important thing is that the people should themselves choose how they want to be represented – they do not have to accept the institutions chosen or imposed by others. They can also choose to be represented through several institutions, not just one.

Conformance with the MSPO standards explicitly requires that organisations allow communities to choose for themselves how they represent themselves in negotiations.

Identifying community representatives is often a complex matter, as customary systems of decision-making have been only partially incorporated into local systems of administration. Communities may thus be presented by a multiplicity of institutions. The organisation must respect the choice of the communities to decide who represents them and should not assume that the Government recognised village spokesperson are the only legitimate representatives for negotiations.

Establishing with whom to have dealings in negotiations about land is thus a challenge for organisations. To avoid misunderstandings and/or entering into agreements that do not secure the consensus of the communities and thus result in conflict, organisations should first work with the communities in an open way to identify who the communities choose to represent them in negotiations. Where there are doubts or mixed messages the best advice is to include more parties rather than unilaterally select fewer. The more time that is invested in establishing good communications at the beginning of a negotiation process, the more likely it is that negotiations can proceed in an agreed way thereafter.

How to provide information to allow fair participation and informed consent

The provision of adequate information to interested parties is a core aspect of Free, Prior and Informed Consent. Before communities can make fairly based and informed decisions about proposed developments on their lands, they need to understand the long- and short-term implications of developments including their:

- Potential impacts and costs
- Potential benefits and gains
- Legal implications

Transparency, information sharing, and communications are core considerations of the MSPO standards. In cases where development has already commenced and conflicts persist, transparent communications become even more vital.

How to ensure consent is freely given

A critical aspect of a proper Free, Prior and Informed Consent process is that the decision-making by the communities – about whether or not to accept a development on their lands (or in some cases, a proposed conflict resolution) and if so on what terms – should be non-coercive and free from other forms of manipulation, intimidation or duress. Adequate time must also be given to communities to consider proposals on their own in their own ways.

How to ensure consent is prior?

A critical aspect of FPIC is that communities are asked to make decisions well prior to investments, land acquisition or development plans being put in place. Communities must be informed and consulted about proposed plantations long before developments are decided on by organisations.

Processes of Free, Prior and Informed Consent should thus be iterative, that is say they imply an ongoing relationship between the organisation and the community. Typically, an organisation would first scope out an area of potential land for development, then identify the communities there and scope out their representative institutions and then negotiate with the communities to carry out a participatory impact assessment. During the assessment, the exact extent of community lands, their systems of land use and systems of representation could then be determined. If the first phase of the impact assessment suggests that the area is viable from an organisation point of view for planting, the community can be asked if it wants the organisation to develop the area or not: a decision it can make based on its own inclinations and the information from the assessment.

If the community is not interested in a plantation the organisation should respect their decision. If the community agrees to open negotiations, the organisation should still not assume that planting can go ahead. What is then required is that the communities and the organisation enter into a dialogue to explore in more detail the conditions under which the investment can be accepted both by the organisation and by the community. It is noted that in general, the FPIC process is still applicable for resolving any conflict or land disputes that occur during all stages of development and operations.

How to ensure there is consent?

If all the above conditions have been satisfied, then there is a good chance that a decision based on Free, Prior and Informed Consent can now be reached. The potential overlap between community lands and proposed (or ongoing) developments should have been clarified, for example by participatory mapping. The community will have chosen and explained which institutions will directly represent the community in negotiations with the organisation and the organisation will have accepted these arrangements. If the communities had agreed to such a step, then in order to generate adequate information for informed decision-making, participatory impact assessments will have been carried out which will make clear to the communities what they stand to lose and gain and what the legal implications of the plantations are for their lands. Community members will have been free to get counsel and discuss their options with advisers of their choosing and time will have been afforded to the community to give consideration to their options prior to any final decisions being made.

A key aspect of the negotiation and decision-making that will ensure is that the communities' representative institutions are given space, time and opportunity to freely consult and discuss their options among themselves and with other interested parties. Customary decision-making often requires lengthy debates in the longhouse or other community forums between community representatives and the wider society. Such meetings are often interspersed with periods when decision-making is paused while further consultations and informal discussions are carried out at home and in council with other parties. Moreover, community representatives may enter negotiations with companies with mandates which require them not to make precipitous decisions but to bring interim offers and options back for wider discussion to allow communities to consider their options based on more detailed information. It is vital that companies respect these processes if they want to ensure that amicable and consensus-based decisions are reached among the community.

Assuming that the community has been reassured by the information provided that the plantation can bring them benefits, the stage is thus set for negotiations.

The details of these negotiations then need to be written down and agreed by the organisation and the communities involved in a formal agreement that is notarised as a legal agreement binding on both parties. Preferably such agreements should also be endorsed by the local government or relevant authority.
